REPORT OVERVIEW

This report highlights the latest insights from the Skift Recovery Index. The index covers travel's performance since January 2020, up to and including July 2021.

The Skift Recovery Index is a real-time measure of where the travel industry at large — and the core verticals within it — stands in recovering from the COVID-19 pandemic. It provides the travel industry with a powerful tool for strategic planning, of utmost importance in this uncertain business climate.

We work with [Amadeus](#), [Aviasales](#), [Beyond](#), [Cendyn](#), [Collinson](#), [Criteo](#), [Duetto](#), [ForwardKeys](#), [Hotelbeds](#), [Key Data Dashboard](#), [OAG](#), [Onyx CenterSource](#), [RateGain](#), [Shiji Group](#), [SimilarWeb](#), [Skyscanner](#), [Sojern](#), [Transparent](#), and [TrustYou](#) as data partners to provide you with a monthly update of travel performance in 22 countries around the world.

RECOVERY STALLS AS SUMMER FADES

As we are in the midst of the summer break, we provide a swift update of travel's recovery this month. After the break we will start providing more in-depth analysis again.

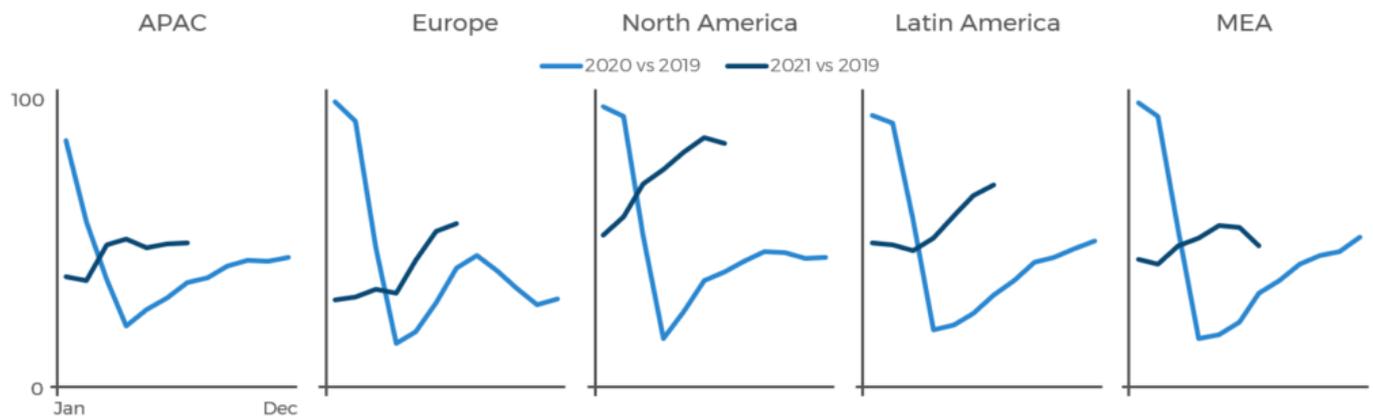

July saw a stalling of the global recovery which had been strong over the past months. While July 2021 looks much more positive than July 2020, destinations and operators will feel some trepidation about the fact that July, normally a bumper month for destinations in the northern hemisphere, was not shaping up to what it might have been.

As we discuss in almost every Highlights report since the Index's inception, recovery is extremely unequal.

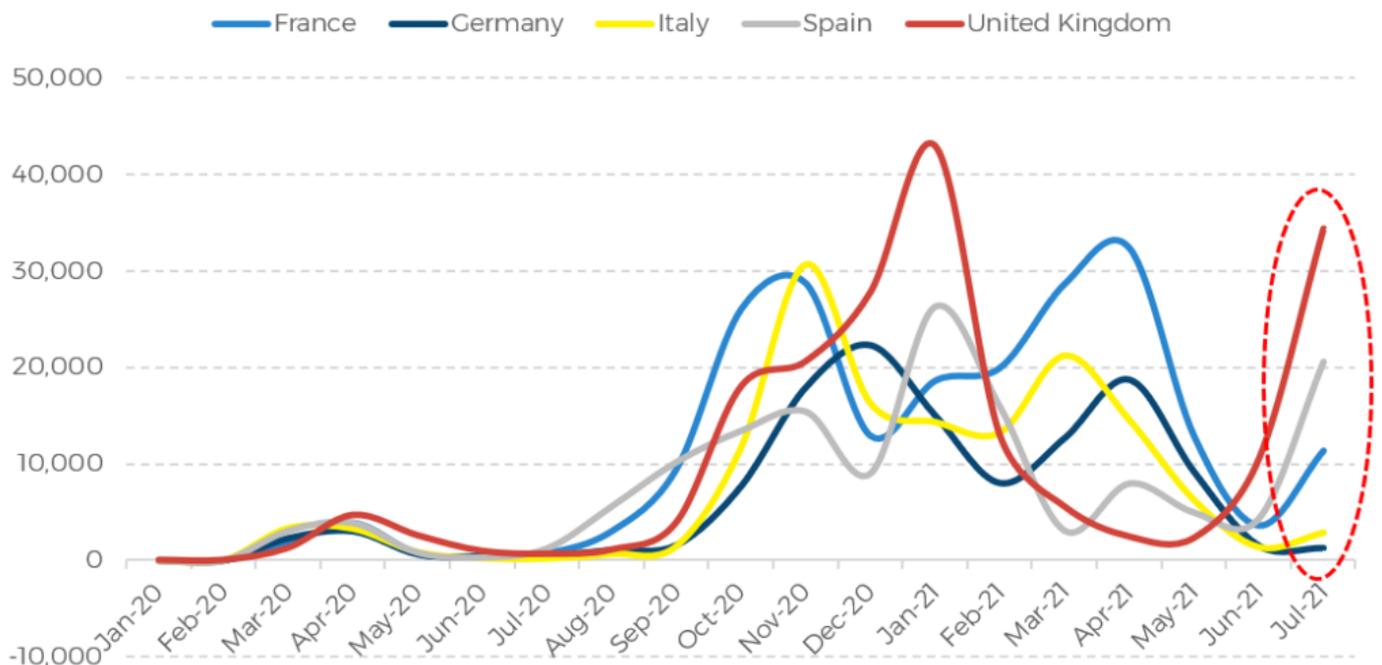

Travel Recovery Scores by Region

Source: Skift Research

2020 saw very similar recovery trajectories for all regions, with the exception of Europe which registered a real bump in travel volumes over the summer months, followed by the worst performance of any region during the end of 2020 and beginning of 2021. While things have improved for European destinations in 2021, its current recovery path is completely in parallel with that of 2020, obviously with the hope that there won't be a slump after the summer season. Worryingly, however, new Covid cases are again increasing in many European destinations as countries struggle to tame the Delta variant.

Average Daily New Cases for Select European Countries

Interestingly, the country with the highest number of new cases was the UK, which also had its much anticipated and postponed 'Freedom Day' — the day that all lockdown restrictions were lifted — on the 19th of July. In the build-up to this date, the UK had already seen a stark improvement in its score, and while July saw a relatively tempered increase of 3 index points

compared to June, it did provide some much needed relief for many destinations that rely heavily on UK travelers.

According to data from Skyscanner, bookings for outbound flights from the UK jumped up after July 8, which was the day it was confirmed that 'Freedom Day' would go ahead. Spain, Greece, Italy, and Portugal were the most searched international destinations according to Skyscanner.

WORRIES AS DELTA SPREADS ACROSS THE GLOBE

For all intents and purposes, the Delta variant has now truly spread across the entire globe. The U.S. is seeing a sharp increase in new Covid cases mostly driven by the Delta variant, and many Asian countries are setting new daily case records since the beginning of the pandemic.

A [recent note](#) by JP Morgan's economists Jesse Edgerton and Peter McCrory warned that: "COVID case counts are still growing rapidly, even in highly-vaccinated states. Google search data suggest that public focus on the Delta variant has intensified in recent weeks, and Chase card spending in some travel and entertainment categories has fallen." The U.S. saw a decline in its Index score for the first time since November 2020.

In Asia also, July started to see an uptick in new cases, and this trend is ramping up further at present. Australia has been particularly hit, with STR noting that hotel occupancy has been on a rapid decline since new and extended restrictions have been put in place. The country saw the largest slump in our July update. In Indonesia, hoteliers have been [hoisting white flags](#) in protest against renewed lockdown measures.

Thailand has the lowest Index score of any country we track, and the government has recently announced that it is extending lockdown and curfew measures for an additional two weeks until at least August 18th. A [recent report](#) by Horwath HTL said RevPAR for Bangkok hotels will not return to the pre-pandemic level until 2025 due to the gradual rebound of tourism demand compared to supply. Vaccine shortages and the effectiveness of these vaccines add to this tempered forecast.

However, there are some bright spots. The Thai government's Sandbox pilot program continues. In the pilot program, Phuket Island, one of the largest Thai destinations in normal times, opened up on July 1st for fully vaccinated travelers with no requirement to quarantine, but with access to the mainland cut off. Since reopening, 335,000 hotel nights have been sold, representing total revenue of 1 billion baht (\$30 million). Further activity is expected in August and September, with a total target of 8.9 billion baht in revenues (\$266 million).
